

# MEMORY

## MEMORY

### **Urban Targets:**

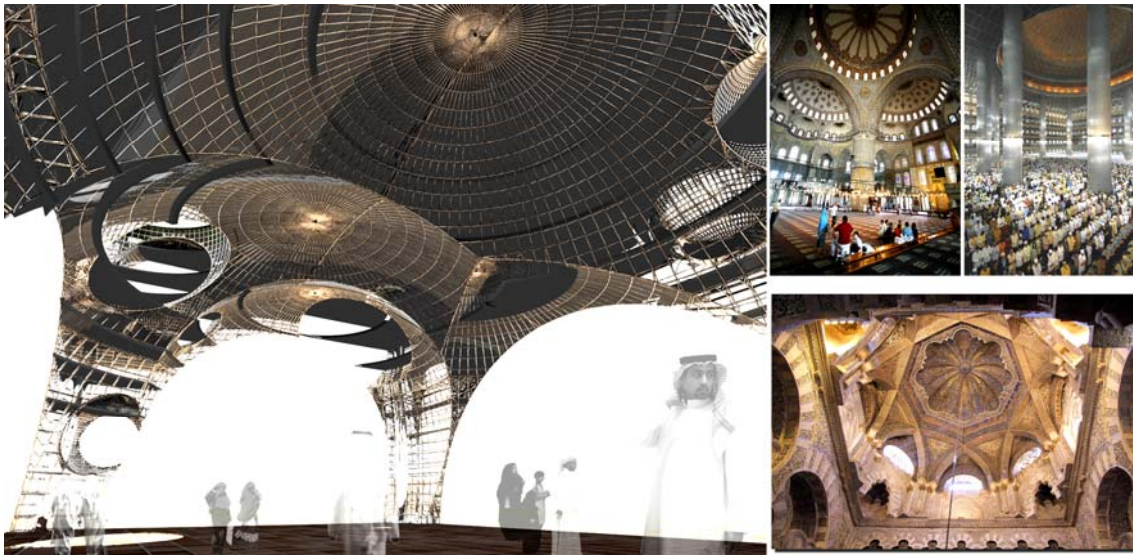

Objective aims to be an urban icon reference within the city, an icon of social and also cultural reunion. Example: Eiffel Tower

### **Architectural objects:**

It is intended to give an account of the ancient culture of the Middle Eastern culture, as reflected in the buildings made of masonry of their monasteries simple versus new construction technology today. Pointed arches as far as constructively to achieve the maximum capacity of indoor area for many people and this relationship is to get to that

point.

**Functional Goals:**

Mirador + Center + cultural viewpoint of social reunion. The sum of these points at the end to reach an optimal result

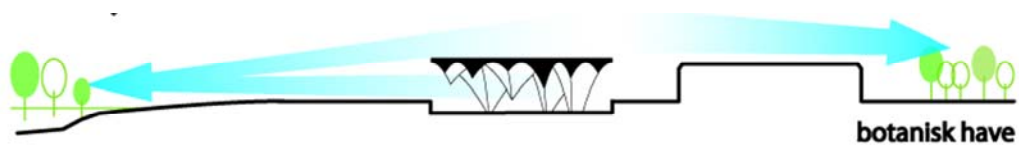

The project wants to give the feeling of cultural transfer of the old wing and the future and this time create a pause in the project, a shelter and a place of residence within the city such as parks.

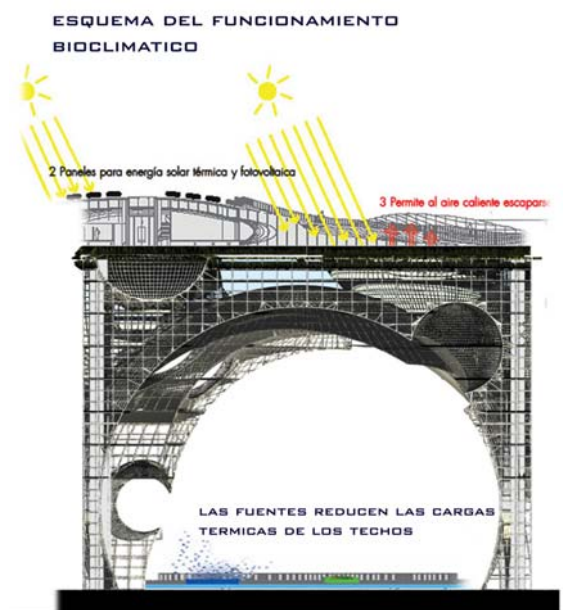

### Technical Solutions raised:

Was divided into 3 parts, Mirador + programs to access or place of reunion for people to get up this project and this is a shelter for people, a place of rest in the shadow of the break. The program will then be the eyes for the city, where you can not from the 0.0 level constructively speaking, but from the peak height of 10mts +.

### Solutions for building:

To create this idea pause is the idea of structural table = 1 + 4 feet where a horizontal platform legs will be access to the cultural center
